Prototypes

A lot of times, you will find people saying JS is not object oriented instead it is object linked to an object kind of language. The sole reason for this is Prototypes.

What is Prototypes

Prototypes in JS is the mechanism using which objects share properties with other objects.

Events
protoype
bookEvents()   Parent

movie   comedy   concert

protoype   protoype   protoype

child   child   child

Object   prototype
function
                    constructor

events   prototype
function
                    constructor

movie   prototype
function
                    constructor

comedy   prototype
function

movie object
